2013.02.15 FAIL 2.0.0 (2013-02-15)
2013.02.03 updated: Lotharek
2013.01.31 Fatih Ayguen: AspeQt 0.8.7

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Anyone interested in a Atari XEP 80,
before I put it one E-Bay?

phantomm@suddenlink.net

Thinking of selling some 8-bit stuff...

Thought I would ask here first, if anyone is looking for
any hardware or software?

If so, send me e-mail please.

thanks,

Barry

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Anyone interested in original Atari Cassettes?
Some are games by other companies.
Others are by Atari with their label.
For example Energy Czar, Invitation to Programming.
Some of those comes with manuals.
Would like to get rid of em all at once.

Interested just email before someone else buys them.
there are around 15 to 20 if not more.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known web locations for the latest version of this document:

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

Toradol or Ketorolac is used to treat different pains in people. This medicine is a temporary healing of mild or harsh pain in adults. Mostly this medicine is used for relieving the pain during operation or surgery.

Toradol is a nonsteroidal anti-inflammatory drug (NSAID). It acts by preventing your body's construction of definite natural essences that makes inflammation. It this way this medicine reduces inflammation, pain, or fever. Users can purchase this medicine from here in very good prices.

Don't have a panasonic.

Do have a Atari XDM 121 Daisy Wheel Printer, which is more used to do
a nice letter type set. I still Have my STAR Gemini 10, I just uncovered it
to day and also some black type writer style ribbons. That printer really
cuts down
on Ink cartridge costs. I just bought a new All in one printer not long ago,
and
all ready I've had to replace one Ink Cart. For a few more dollars, I could
have
bought a new Printer with New Carts. CRAZY, I can almost see that moutain
of printers going into a land fill over crazy Ink prices.

Anyway XDM121 is for sale or trade at right price, but not giving it away.
The ribbon cart, can probably still be found. and I think the one I have
still has a few pages left in her.

Rock on!
Barry

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Greetings everyone!

Here is the lucky winner for May 2013 at The DarkForce! BBS:

May 2013
1. David wins a free 12 issue/1 year subscription to
   Atariuser Magazine!

Also, here is the June 2013 prize:

June 2013
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner(s), and good luck to this months callers!

 :)

PS David, I need your e-mail address!

By John Bear

According to Kozar Cool Blog, the top five myths about video games are:
Video games lead to violence.

• irls don't play video games (I know at least one who does, a lot).

• You can use the chips from a PlayStation 2 to make the guidance system
on a missile.

• Pong was the first video game.

The number one video game myth: there are millions of Atari cartridges buried in the desert of New Mexico.

Well, that last one might actually be true.

If you check out the Alamogordo page on Wikipedia, you will see information on the Trinity Site (even if it happened closer to Socorro), Ham the Space Chimp and the so-called Atari Graveyard.

Probably Located off First Street near the Charlie T. Lee Memorial Relief Route, the old landfill now dons old toilets illegally dumped next to the dried-up blooms from century plants.

Joe Lewandowski who has been in the garbage business for decades said the urban legend about thousands of copies of E.T., The Extraterrestrial Atari game buried in an old landfill on the west side of town, is one of the biggest rumors among gamers.

Lewandowski said some people believe the story.

Others don't.

In fact, I had scarcely finished an online story about a film company coming to search for the games before he received an email from an author of a book stating that the myth had already been debunked in a book. (His book, by the way.)

Lewandowski said many of the people who were involved in the massive game dump have since died, which does nothing to quell the imaginations of the more conspiracy-minded people out there.
Some people have said the Daily News reporter who wrote the original story in 1983 doesn't actually exist. She did and has also since exited the mortal coil. The plot thickens. Cue sinister music.

Whether you believe the legend is one thing. But everyone pretty much agrees that the E.T. game has one major problem it isn't any good. E.T. keeps falling down a hole, so a player can't really get anywhere except for the beginning, over and over and over ...

Lewandowski said millions of the games were manufactured and almost all of them were returned (except those believed to lie beneath the Friendliest Place on Earth, Alamogordo).

District 1 Commissioner Jason Baldwin earlier this month admitted to having played the game and said that, indeed, it was horrible.

You can shag a copy of the game on eBay for about five bucks. If ironic detachment is your thing, someone also sells T-shirts emblazoned with "Atari 1982" and a pixilated image of the wrinkly little alien from which the game derives its name. A band called Wintergreen even made a music video on the subject.

Lewandowski said Atari already had fallen on hard financial times. The company paid Steven Spielberg tens of millions of dollars to license the E.T. name, and the dud of a game caused its worth to sink even farther.

He said he was present at the landfill in September of 1983 to see the first of nine truckloads of the games that were allegedly dumped by one of his competitors. Laws regarding the discarding of garbage and the running of landfills were much more relaxed in the early 1980s.

Twenty one more truckloads of the games are believed to exist, but where they ended up remains a mystery. Thieves purportedly hijacked one of the truck loads and rode it to Mexico, he said.

Lewandowski said some of games and other Atari-related brick-a-brack were run over with a bulldozer and slathered in concrete, which probably helped to preserve them if they are, in fact, actually there.

Local youth took advantage of lax security at the landfill the night the first games showed up and soon local stores were being inundated with people bringing in crates of the pilfered electronics to sell, he said.

Lewandowski has wanted the story to be told for years and said more than one cable channel has floated the idea, though none has ever come to fruition.

He might get his chance. The city commission on Tuesday agreed to allow Fuel Industries, a company with offices in California and Ontario, Canada, six months to dig up the old landfill where the games are (maybe) buried. Fuel did not respond to a request for comment.

Lewandowski is pretty sure where the games lie, but he ain't sayin' just where. You're just going to have to wait.

---------- Original message ----------
Subject: Atari Party 2013 is 1 month away!
From: Bill Kendrick

Atari Party 2013 is one month away! I hope to see you at the public librar=
y here in Davis, on Saturday July 6th! Many of us will be there setting th=
ings up at 10am, when the library opens. The event officially starts at 12=
 noon.

  http://www.newbreedsoftware.com/atariparty/2013/location/

If you're coming from out of town, and looking for a hotel or motel, here a=
re a few links that you might find useful:

  * Google Maps search for "hotel" near Davis
    (note: check-in set for July 6th, the day of the event; change as neede=
d)

    http://goo.gl/maps/V4AAI

  * "Hotels" pages on the DavisWiki and WoodlandWiki:

    http://daviswiki.org/Hotels
    http://www.woodlandwiki.org/Hotels

    (Sadly, the West Sac. and Dixon Wikis don't have anything on their
    "Hotels" pages; but they're wikis, so you can help fix that! ;))

Want to help?

We're still in need of TVs (I need at least 3 more than I have, to set up a=
ll of the systems I'd like to bring), and volunteers to help 'usher' (hand =
out raffle tickets when people arrive, and help attendees -- or at least po=
int them to someone else who can help).

I'm also considering buying a pair of game consoles (Atari 2600 & 7800, plu=
s games & controllers) from a local comic book store to give away as prizes=
. They're asking $50, but I'll also need to buy some power supplies, since=

they have none.

However, I have $0 budget this year, since so far all donations have been g=
ive-away items. While this obviously isn't a deal-breaker, it's always coo=
l to have actual Ataris to give away as prizes, so I thought I'd mention it=
, just in case anyone out here felt particularly charitable. :)

Thanks!

Not on wait list, I think it is one of those pay for it now and they hold your money for you. If I have it correctly, they have to order them from Farnell<sp?> in England and wait for the shipment.

I'm kind of sensitive when it comes to being disappointed. I recently got burned on the 6502.org site trying to buy a 65816 system. I think the guy trying to sell me his died so he had a good excuse. I laughed, I cried, I kissed my hundred bucks goodbye! I don't mind on line stuff, only been burned maybe 8 times in the last 10 years. Heck, your right, it's only $35 and there's some action going on. I should at least get on the wait list even if it costs me. I was looking at Python and it seems enough like everything else 'structured programming' that I think I could pick it up.

BTW: There's a ton of knuckleheads on fleabay selling them for 3x their original purchase price. I hope a bird shits on their heads!!!

I am in my 60s so now I calculate everything based on my chances of dying before it gets here.<grin>

There are 2 companies making them, I believe both are in England. It
doesn't cost you anything to get on the waiting list. I finally got my
special link to order in May, and that was when I had to pay. I then
received a notification from DHL several weeks later that it had been
shipped (from England) and it was delivered less than a week after that.

Yes, there was a lot of waiting, but after waiting for a certain
Atari-related product a few years ago that I did have to pay upfront
for, it was like the blink of an eye... ;)

And the great thing is that the night I first hooked it up, my 15 year
old daughter spent over an hour playing with it. She liked that she
could do whatever she wanted without worrying about messing something

up. So it's serving its purpose. :)

They dinged me pretty hard on shipping and tax. $47.78 out the door.
Apparently Newark is a division of Farnell now.

We'll see if their web site that said 141 days or their purchase order is

right. Five weeks wouldn't be so bad.

I saw where someone has already done a SNES port so it has enough horse power to do anything I would ask of it. I'm maybe 80% sure I know where the Colleen/Droid 800 code is screwing up. Gawd awful, I am going to have to set up the tool chain and learn ARM assembler to make sure.

It does look like it could be a must have for an Atari hacker. Just about everything else costs $100+ to do anything worth while. This should be a Swiss Army Knife in that it could substitute for everything from being an emulator to SIO2SD to ATR8000 to XEP80.

I see that it's being offered by US companies now as well:
http://www.alliedelec.com/search/searchresults.aspx?dsNav=Ntk:Primary|120626raso|3|,N:108&utm_source=seg&utm_medium=email&utm_campaign=120626_raspi_invite_email

(Or perhaps you already knew that, and that's where you ordered from?)

No, I checked out their price just now and total cost was about the same. Purchased mine from Newark/Farnell so I think they will get it to me faster. It would have been placed on back order for 3 months according to the web site. I couldn't really start working on it sooner then that anyway. I've been doing other stuff like building an electic bicycle for my 3 year old grandson. I should do some more work on it right now.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:
- ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/welcome
- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

Description:
Exclusive TV SCART Cable (RGB+Audio) compatible with Atari ST/STE/STF
systems.

It will work flawlessly with the majority of the available TVs, including
both CRT o LCD ones, granting the best available video quality out of the
above mentioned machines.

Superb quality of picture and great audio sound, this Cable includes
internal ehnancements which expand its working range even to the most modern

LCD TV Sets.

Compatibility List:
STE, STF, 520STF, STFM, 1040ST & MEGAST

Link: http://snipurl.com/atarist_rgbscart

Cheers,
Oge

UPS hand delivered my Raspberry Pi today. Saving me the 8 mile drive into town makes it worth the shipping & handling costs. Package included The Raspberry Pi, the P.O., and the SOP 'we don't use lead anymore 3"x4" sheet' that you need a magnifying glass to read. That's IT! Least they could have done is rubber stamp to a link for online line references. Oh well, probably a back handed compliment in they assume if you were smart enough to know about it, you probably already know enough to get started.

Spent 40 minutes to download a tool to create the boot SD card. Frightens me to think of how long it will take to actually down load the linux distribution. I may just head into town with an Android tablet and snag the distribution from a WiFi hotspot. Not to offend any linux users but the RPi web site says an Android port is in the works. I kind of like the Android OS and will probably jump ship as soon as it gets stable. I think I will check out fleaBay and see if someone is selling SD cards preloaded at a reasonable price.

I've got a couple of composite monitors I use with my Atari and satelite tv. I think I may use the RPi as an excuse to pick up a HDMI monitor. I am giving up the ghost on all my CRT VGA monsters. I may keep a few LCD VGA monitors but only the versitle ones with features like DVI, composite, et cetera, inputs.

Wish I was young and still had the energy for this. I started looking at RS232
http://www.logicethos.com/Blog/2012-06-21:_Pi232_Raspberry_Pi_RS232_boards
then did the hand slap applied to the forhead thing: There is no need for it. Should be able to bang out an SIO2PC type hack with only a single $.08 diode. I have to scan the schematics and specs to make sure the I/O is 5V tolerant. These days I think everyone who wanted an SIO2PC or SIO2SD has it already but it does make sense. It would have made more sense 5 years ago but you couldn't predict this was going to come along. The ethernet port and ability to add a USB WiFi dongle give the RPi the ability to be another APE type device.

Rick

Started d/l and got the time estimate of 9 hours. Aborted. It never goes as
fast as it says. Probably would have taken me an hour even at a WiFi hotspot
and I don't know that either of my tablets could stay up that long under the
load. Heck, Android is linux mostly.

Found someone selling preloaded linux distribution on a 8 gig Transend SD

for ~$11 shipped. I made it mine.

> cetera, inputs.

They are supposed to be considering VGA connectors. Composite sucks. It
works but output is poorer then most Ataris.

Old USB keyboard I picked up years ago at Halted, USB mouse, cellphone power
supply<lost/stolen my ~$300 cellphone last month, that hurt>, old Samsung
TV/Monitor.

Thing boots quick! Snappy performace. Just about a complete lack of software
available on the SD card. Browser, development package for Python, an editor
or two, 8 or so lame games. I haven't hooked the ethernet port yet but I'll
assume it works just as well. Tried looking up existing apps and games, not
much available.

By snappy I mean about like a 300 mHz Pentium running W95. I am thinking
good'nuff. One of the powers that be is porting SNES emulator, someone else
ported Doom me thinks. Couple of people working on turning it into home
theater or MP3/MP4 player. Really, a good MP3 would make me a happy camper
as with the 8gig SD card it would pretty much hold everything I have. *BUT*
the bad news: The stereo jack is right next to the HD busy LED and you get
buzing and clicks as the OS accesses the SD card! OUCH! I have to check out
the HDMI cable but haven't bought a monitor/TV with HDMI input yet.

> diode. I have to scan the schematics and specs to make sure the I/O is 5V

NOT 5V tolerant! Well, not a huge problem. Just means I have to add a couple
of zeners to both output and input and current limiting resistors. The Atari
data output is definately 5V and you can never tell when someone pulls up
the input. Up way to late and need to sleep on this.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Hello!

Sadly, seems like the posting of the BITS demostrations have been deleted or
filtered out.
Then, I will be re announcing those demostration again.

Find BITS demostrations at:
http://thebitsclub.tripod.com/

Greetings,
BITS

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:

- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

That website is acutally an ebay listing. I couldn't find a link, email
or phone number there, sorry.

Dennis

Greetings,

I have a rather large assortment of Atari 400/800/XL/XE Books.

Without listing them all now, As I have most in Storage, I wanted to
announce
that I have most if not all of them for sale.
Buy One Book or as many as you like.

You will just have to ask me if I Have the name of the Book or Books.

Some of these are from Compute! Like "The First Compute Book Of Atari Graphics"   I think i have the 2nd and 3rd
editions of that series too. Also, other Books by Compute!   And other Books by other companys. Some go deep into
the design of the 8-bit system. And the Language. Some go over the different items that were first made for the 400 and 800.

Price of Books depends on condition, Somewhere between $4.00 and $12.00. with the Sale that I have on them.

Also, I have a nice XEP 80 with original software disk. For possible sale or trade.

I am looking for a ICD Sparta DOS X cartridge for sale or trade. I have alot of Atari 8 bit stuff and also Atari 16bit and 32bit
stuff. So if you have one I hope we can work out a trade or deal. I sold my last one by accident. Still have the original
manual and reference manual.   As I have an ICD MIO 1 meg unit I enjoy using that cart with it.

I also have a ICD P:R Connection, that I would probably trade for the SDX cart. even though it is the only one I have left.

Looking for something just e-mail and ask.

thanks,
Barry

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here.  "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others.  Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products.  Titles of products produced by the
developer are listed.  No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book.  Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed.  Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices.  Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title.  If no company name exists, a personal name is used.  "See"
references indicate complete information may be found under the given
heading.  "See also" references indicate closely-related information may
be found under the given heading.
```

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange

The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Instead of selling the books would you be interested in donating them to
Bombjack.org for scanning and archiving as PDF files?

That's a possibility. But there are alot of books, some softcover and some hardcover. Plus magazines.

Some I don't want to let go as I still use some of them. Like collection of Compute! Magazine.

Some books go into the 6502 chip and are techie.

I will consider it, maybe there are some I can donate.

Can you pass along where to send them and etc...

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Greetings.

it should be better to emphasize the fine tuning of the color simultaneously
thanks to the graphics without the color remote surveillance;
But this site gives some ideas http://fr-fr.facebook.com/sylvie.lovric in the
particular case of the graphics;
could you explain how to determine the graphics remote surveillance and the
collaboration with the color facilities management?

Bye Bye

Greetings.

it might be appropriate to troubleshoot the remote surveillance of the color
in a rapid manner;
As a matter of fact, you can try also http://www.etsy.com/category/art/painting;
how do you emphasize the graphics recovery and the concept of the color facilities
management?

Posting-Frequency: 20 days
Last-modified: December 8, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

How is SIO speed increased? I want to increase the speed before loading Drol or MULE ? I have US doubler 1050.

Can we convert the disk MULE or Drol from single density to double? any way?

Jack Tseng

Well having a disk in single density instead of double density would
help it load a bit faster.

Also, loading the disk image over a APE interface or something other
than real SIO floppy drives would be even faster.

> How is SIO speed increased? I want to increase the speed before loading Drol or
MULE ?I have US doubler 1050.

Some devices (probably the US doubler) have non-standard high-speed SIO
commands. However, that requires a custom SIO, the one in the Os is not
able to communicate with a higher speed. The trouble is that most games
require all of the RAM, and will not be able to jump into another custom
location to load the data. For the XL models, copying the Os ROM into
RAM and patching there might be a solution, though is not easily
accomplished.

> Can we convert the disk MULE or Drol from single density to double? any way?

You can certainly convert to ED if you have a version that is not copy
protected. For DD, the sector size is different, and hence the bootstrap

of the games have to be completely modified. Why do you want to have
them in DD? This doesn't buy you much.

Greetings,
     Thomas

Greetings everyone!

Here is the lucky winner for March 2013 at The DarkForce! BBS:

March 2013
1. Atarian wins a free 12 issue/1 year subscription to
   Atariuser Magazine!

Also, here is the April 2013 prize:

April 2013
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winners, and good luck to this months callers!

 :)

PS Atarian, I need your e-mail address!

2012.11.02 Jan Johnsen: Rocket Rescue 1.5, Mary Poppins 1.12

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the

latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

I've been gone for awhile, but I do try to check in from time to time. I
hope all is not lost, next year my 800xl turns 30!

I watch it also. I've got 2 800's in storage, keep telling myself that
someday I'll get one or both set up.

I'm here. Been Apple'ing it up for the better
part of the past 10 years, but I do have a 400
and an 800xl set aside for if and when the time
comes that I want to return to my roots. I have
also a 7800 game system stored away, and yes, it
still works. Thought I had a 2600, too, but I am
at a terrible loss to find the thing. :(

They aren't 8-bits, but I've got a Portfolio and a Hades 060 also. Lots
of software and peripherals for the Hades.

I'm still around as well. Got Atari's just all over the place. :)

800XL

Jaguar with CD

Lynx

Mega ST

Mega STe

STacy (running at 40mhz)

Falcon 060

and want to get a Suska and a FireBee!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:

- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

Good to see you Gozar. What is new over there?

Still tinkering with the Atari 800 (beige) and hoping at one time to get
the incogneto board, which I paid for in May... someday. :P

Its a new board that gives the older 800 full XL/XE compatibility.

Check it out on Youtube here:

http://www.youtube.com/watch?v=iavrSCSp43U

and at AtariAge here:

http://www.atariage.com/forums/topic/199490-incognito-board-preoder/

HTHs. :)

Happy 2013! I would love to see a project like this for 8-bit Atari. How cool
would it be to have an 8-bit Atari compatible laptop with wifi and
solid state storage (without another OS and emulation)?! I see
some are thinking about it or working on it.

Greetings everyone!

Here are the lucky winners for December 2012 at The DarkForce! BBS:

December 2012
1. Klenotic wins a free 12 issue/1 year subscription to
   Atariuser Magazine!
2. Gemini8 wins the PeST Serial Mouse Adaptor!

Also, here is the January 2013 prize:

January 2013
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winners, and good luck to this months callers!

 :)

PS Klenotic and Gemini8, I need your e-mail address!

Hi folks,

a new release of Atari++, the portable atari emulator for Linux and windows has been released on http://www.xl-project.com/ - as usual, you find there the Linux sources and a compiled version for 32-bit Windows. There are so many changes this time that it's hard to start, most of them address defects in the emulation core and not so much in the user interface. There were quite some changes I would love to add, but my vacation is about to end in a couple of days and I was wrapping up to get this release out.

So what's new this time: (long list):

- Priority engine for the "fifth player" generated by missles was redesigned and should now reproduce all possible cases, including the priority conflicts correctly.
- Color mixing of the fifth player on top of GTIA modes C0 and 40 should now work correctly.
- Timing of the GTIA "strange mode" where PF0 to PF3 are used for a HIRES generated playfield was made more precise.
- Color lookup for GTIA modes C0 and 40 on top of non-HIRES ANTIC modes was fixed.
- Player-playfield color mixing for GTIA mode 80 was fixed.
- Experimental support for on-line player and missile resizing was added.
- ANTIC display generation was re-designed yet again and was rewritten.
- ANTIC DLI and NMI timing was made a lot more precise and should now work to the cycle.
- ANTIC VSCROLL support should now work to the cycle.
- ANTIC DMA cycle allocation should now be finally correct for all modes.
- Added emulation for ANTIC forgetting the sync signal if the last line on the screen is HIRES.
- Added emulation of carrying the DLI and VSCROLL information across vertical blanks from the last displayed scan-line.
- The jump on vertical blank ANTIC instruction did not generate a DLI on each line if DLI was enabled. Fixed
- The rather ugly re-generation of ANTIC modelines for character-based modes was removed. This simplified the design, but might impact the emulation quality in some corner cases. A new ANTIC design would be required to fix this. More careful timing in display build-up should make this unnecessary anyhow.
- DMA border computation is now much more canonical and cleaned up.

- Since a lot of the internal timing should now work "on the cycle",
there is no longer a need to configure some of the ANTIC variables, thus
parts of the ANTIC preferences have been removed.
- CPU emulation includes now parts of the unstable opcode family xB
  (opcodes whose lower nibble is B).
- The CPU emulation includes now the emulation of most (if not all) 6502
bugs: Forgetting conflicting NMIs, IRQs and BRKs (!).
Wait-cycle allocation was partially wrong and created conflicts between
  memory-refresh cycle allocation and WSYNC requests. This was fixed.
- As a side effect, the special "double WSYNC" check was no longer
necessary and was removed. The emulation is correct anyhow.
- Some CPU preferences were removed because the emulation is considered
to be precise anyhow.
- PIA DDR register reads were not emulated correctly.
- PIA emulation includes now flank-detection on CA2 and CB2 plus
interrupt generation, and thus should be complete.
- POKEY 9 and 17 bit random generators are now emulated precisely, and
the generated "random" numbers should be now identical to those on the
real hardware.
- POKEY two-tone mode should now be emulated correctly, including the
cycle timing for the linked channels.
- Some race conditions for the serial control mode should now be
emulated correctly.
- POKEY direct serial input should now work fine with the SIO emulation,
though direct serial output does not yet work.
- Handling of the POKEY keyboard generation was wrong and should now
work correctly.
- The SIO patch resets now also the audio registers and the IRQ control
of POKEY to work around some software bugs.
- Os++ did not check properly for the RESET bit in the Antic NMI
register and could have triggered false resets under some race conditions.
- The legacy return value for the write-byte bus access was removed as
it was no longer required since a long time.

As always, you can reach me here or better by mail at thor <at> math
<dot> tu-berlin <dot> de.

Greetings and a Happy New Year,

Thomas

I have added an Atari computer blog on my website. Check it out if you
have a chance. http://falconproductions.us/blog. I'll be writing
about Atari computer news, my own experiences in Atari Computing, and
music production using Atari computers. The latest article promotes
using usesnet to communicate. Thanks!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

Hello Michael,

its good to see you are still updating all the A8 lists and texts (A8FAQ, Vendors and Developers list, etc.). Thank you for that !!

I am not sure if you got it - but yesterday I did send you a small e-mail with a few corrections for the A8fAQ. Hopefully you can use the text and thus update the FAQ...

Greetings, Andreas Koch.

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:
- ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/welcome
- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

alt.binaries.comp.atari8bit

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:
- ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/welcome
- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Last-modified: July 25, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of

Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Hello

After analyzing the love, I think that we could extend the work to the
foundation of the spirit rapidly;
But you could get some info at http://energy.sourceforge.net;
why did you focus on the love salvation?

Before thinking about the love , you should try:
http://www.bubblews.com/pulses/1263-spirit
http://www.bubblews.com/news/39314-world-of-parkour
http://www.bubblews.com/news/11380-powerful-thoughts-part-15-the-word

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

As far as I can tell, the power supply on the Mega ST4 that runs my BBS
is out.

I'll order a new one from Best Electronics, but the BBS will probably be
down for a few days...

Apologies!

Many years ago, when the Mega ST4 was my primary computer, I had power
supply problems.

A close examination of solder joints in the power supply revealed a
number of joints literally had developed cracks in the solder. Removed
the old solder, resoldered, and never had another problem.

Might be something to look into.

You're welcome.

I forgot to mention, I had to use a magnifying glass to find some of the
cracks.

Greetings everyone!

Here is the lucky winner for March 2012 at The DarkForce! BBS:

March 2012
1. Dal wins a free 12 issue/1 year subscription to
   Atariuser Magazine

Also, here is the April 2012 prize:

April 2012
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner, and good luck to this months callers!

 :)

Here is the list of what he sent to me, might have some of this still..

Atari 8-bit Equipment

800 in original box w/power supply. Powers up.

800 no box w/power supply. Powers up.

850 in original factory shipping box bad power supply. Powers up.

850 no box, no power supply. Powers up.

810 in original box w power supply. Powers up.

810 in original box, no power supply. Powers up.

810 needs repair

Spare MPI drive mech, condition unknown (new in original shipper)

810 chassis w/power supply board only

3 spare drive mechs, parts only

400/800 port diagnostic board

850 diagnostic turnaround module

400/800 Factory service manual

Misc bags of original factory part and ICs

Misc interconnect cords

Copy of &#65533;The Chip&#65533; installation manual

Boxes range from good to poor condition. Units power up only, no
guarantee of functionality. Drives likely need slide rail lubrication
and alignment.

Hey Doc - do you know Mark G?

I have been unable to contact him. Without a valid e-mail address I
can't deliver his prize... :(

It was Ultimon, and he brought my 800XL machine from me it had both
ulimon and omnimon installed.

"Atari BASIC: A Self-Teaching Guide (XL Edition)" was, along with the
Atari BASIC reference manual (which I distinctly remember reading some of
while I was going somewhere in the car with my mom, and laughed about
the fact that there was a "POP" command :)), was what I used to cut my
childhood programming teeth.

Today I spent an hour or so, whizzing through the first couple of chapters,
having my 5yo son type in some BASIC. :) Good times.

He eventually got distracted by his infant brother (and possibly a bit
excited from eating a bit more Easter candy), and wandered off to play
with another geeky thing he's technically too young for: an electronics kit :)

I am now hankering to do more TurboBASIC XL programming. *nostalgia* :)

Old-timer here who hasn't been on this group to speak of in 10-12 years
or so. And can't promise to really renew my participation at this time,
either. I've been out of the loop a long time. I still have my Atari
system(s) but they haven't been set back up since I had to pack them
away to move five years ago. All my 1200 floppies, too, are a thousand
miles away at a friend's house who's supposedly going to image them all
with some newfangled hi-falutin' hardware gadget, so's I can use them
with one or another of the various emulators.

So Uz, how and when did you and your team become the main developer(s)
of CC65? Is this the SAME CC65 that John Dunning originated back in the
late 90s? I thought he gave all his project floppies to ME. Not that
I've ever been able to READ them... Or did you guys start a whole
separate project and just happen to give it the same NAME? I'm curious.

Chris Chiesa

While I'm not Uz, you certainly find a good overview of CC65 here:

http://www.cc65.org/index.php#Overview

Yes, it is indeed based on John Dunning's sources, as far as I read this.

Greetings,
     Thomas

I didn't get any floppies, and I had no contact to John R. Dunning. I just
downloaded the sources from

    http://www.umich.edu/~archive/atari/8bit/Languages/Cc65/

That must have been around 1996 or so. Since then, most stuff has been
rewritten from scratch. The assembler, linker, archiver and all other
tools are complete rewrites. Same for the library. The only piece that
does still contain some old code is the compiler itself. The whole package
is cross platform now, both on the host and on the target side.

The cc65 web site

    http://www.cc65.org/

has more information. There's also a - somewhat outdated - text file that
comes with the documentation and describes the differences:

    http://www.cc65.org/doc/newvers.txt

Do you have an email address of John? I never managed to get any hint on
how to contact him.

Regards

        Uz

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Jordan Mechner is extracting source code to Prince of Perisa (Apple II
version) and posting it online. Perhaps time for a port? :)

  https://github.com/jmechner/Prince-of-Persia-Apple-II

(Someone ported it to C=64 a while back, but that was from a binary dump

of the Apple II game, not from the assembly source code, that Mechner is
posting today :))

Testing: Going back to OE to post to newsgroups as now google groups won't load because of my slow connection.<sigh>

I certainly applaud the gift and any effort that goes into using it as a resource.

A consistent if not ubiquitous nag I have is standards. I am making a few efforts in that direction, mostly small and feeble. It would have been better if Apple, Atari, C64, et cetera all had a uniform expanded graphics standard available. VGA has 'sorta won on the DOS/Windows/Linux, Android, ... platforms. Ports and new software would be much easier if things like the graphics only had to be done once and could be directly used on all platforms.

Heck, there are dozens of SBC from ARM to Zilog hacks. If there was one platform for graphics and interface to it that everyone agreed on people could get their one off Z8000 computers running the latest greatest youtube video if nothing else.

Rick

Every manufacturer thought their computer standard would win the
format war back then - so no co-operation on common standards.

Prince of Persia Source Code -- Posted!
http://jordanmechner.com/blog/2012/04/source/

  "Let me begin to count the ways I've been lucky with this: The box
  was found. The disks were intact. Prince of Persia and I happened to
  have a high enough public profile that people of Jason and Tony's
  caliber (and dozens of others who contributed their expertise via IRC,
  skype and twitter from around the world) cared.

  "In the bigger picture, our timing was lucky. The 1980s and the
  Apple II are long enough ago to be of historical interest, yet recent
  enough that the people who put the data on the disks are still with
  us, and young enough to kind of remember how we did it. Roland

> Gustafsson, author of the special 18-sector RWTS routines that had
> made our disks super-efficient in 1988 (and unreadable to anyone but
> us), was able to get on IRC in 2012 and explain what he'd done to
> Discferret kids who weren't born then.
>
> "For all these lucky reasons, our archaeological expedition was
> crowned with success.
>
> "From a preservationist point of view, the POP source code slipped
> through a window that is rapidly closing. Anyone who turns up a 1980s
> disk archive 20 or 30 years from now may be out of luck. Even if
> it's something valuable that the world really cares about and is
> willing to invest time and money into extracting, it will probably be
> too late."

Stares at my own collection of 5.25" floppies

Also, thanks to folks like Kevin Savetz (AtariArchives.org &
Classic Computer Magazine Archive) and Peter Brantley,
et al (Internet Archive) who have been trying to archive great
stuff all along! :)

Too many projects but still doing "the bucket list" thing. I did an 1802 system on a breadboard. Quest Super Elf was my first computer. The moving finger writes; and, having writ, moves on. I down right love the 1802 but having seen it run again I think I am happy and can put it away.

Still have a lot of other junk like a CP/M box, DEC PDT/150, Jupiter Ace, et cetera that I want to have one last look at. All low priorities though.

Which brings me on topic. On a lark I decided to build a 6502 type minimalist system. I have some oddball parts laying around, couple of 1050 boards I can get a RIOT, 6507, ROM. I have a 65816 I bought off eBay many moons ago. Not sure which processor I want to use but since a minimal 6502 system needs some ROM and they all have the same instruction set, it really doesn't matter.

Did a paper design with just a ROM at the top of memory and the only system RAM from the RIOT with it mapped/mirrored something like a VCS2600. I checked JAMECO and eBay just in case I decide to return to service the 1050 or VCS I was going to use for parts running w/o having to cannibalize my home brew. Darn RIOT chips are going or $8-$14 plus shipping! I priced out some of the stuff and to build a simple homebrew that you could actually use would cost a small fortune. 6551 serial chips are just about as high. None of this is bad so much as changed.

If you build an old school *functional* computer from scratch you would do well to keep cost under $100. For that same $100 you could get an Android tablet. You can get a CPLD for a couple of bucks that you could put all the same functions on including a soft processor or a SOC with them already there.

Just bought a Atmega16 this week
http://www.ebay.com/itm/270745443529?
ssPageName=STRK:MEWAX:IT&_trksid=p3984.m1423.l2649#ht_3854wt_932
as an example for less then $17. Heck, serial, SPI, flash, RAM, ADC, PWM, built in.

Rick

I've found it interesting that I can still access data from a 30 year
old 5.25" floppy, but when I try to read a 10 year old CDR it doesn't work.

So are you selling this stuff now? I'm a bit confused...

I'll give a plug for Notepad++, seems like a pretty good programming editor.

I was fooling around with my usual TASM testing out making 5200 ROMs and modified a bit of Dan's code so it would work with TASM and added the RTC & inverse video stuff.

Compile with the command line
TASM 5200RTC.SRC -65 -b -fFF
The 5200RTC.SRC is the source file name you use
-65 tells TASM to use the 6502 instruction set
-b tells TASM you want a binary or .OBJ file as opposed to some other output
-fFF tells TASM to fill the unused portions of the ROM with $FF. This isn't really important but when you erase an EPROM it is all $FF's. If for some reason the EPROM fails to program in an unused section, if the programmer reads an $FF it will think it is right. You should be able to just do sections and add stuff later depending on your EPROM.

I fumbled with this right and left, really rusty. Kept forgetting to look for decimal vs. HEX for calcs, made every mistake posible with the assembler -f FF is not the same as -fFF.<sigh>

BUT this really wasn't hugely bad. Talk about a good programming envirionment. I had a DOS window open to the TASM directory, the source file open in Notepad++, Atari800Win Plus 4.0, and Memo Pad in another.

I would edit the source code a bit and save, go to the DOS command line and hit "F3"<return> which would assemble the file, jump to Atari800 and go to the 'insert cart' menu and just let it load the same file. Whenever anything got to crazy I just loaded it into Memo Pad to inspect the binary. I probably should use a disassembler or monitor for the last step but heck, I never went that far south. Finished source to test didn't take 10 seconds and both TASM and NotePad++ were in sync on line numbers. At least for the emulator a BASIC would make sense. You have something like 32k of cartridge space so you could add most of the features that were left out of the OS. Lack of storage doesn't mean much since you can save multiple copies of the emulator state with your resident program installed.

Rick

 Of course the newsgroup post will screw up my formatting but...

Sheesh! There goes another $35 of my hard earned money in the near future
and a journey back into Linux.

I heard someone estimate the new product cycle in the Far East is 4 years.
It will overflow to stuff done in the Western World. If it's true then the
'good old days' like we had where:

1) Parent buys computer
2) Computer is manufactured and supported for decades
3) Child grows up in household and continues tradition for 2nd generation

30+ years of stuff like Atari and Spectrum computers.

There's real competition and innovation going on. I don't think it was that
long ago I was talking about my PMP being programmable and running at ~140
MHz. Just bought my 4th Windows mobile phone off fleabay for less then $20.
I'm giving them out to relatives like stocking stuffers at xmas. I got fed
up with br0k3ass3d friends and relatives complaining about [lack of digital
camera, can't post to craigslist, no email, ...] Something like 400 MHz ARM
processor with built in Wifi let's them sit at McDonalds and surf the
internet.

Android looks strong too. Active community of people hacking and supporting
the OS on everything from phones to tablets. $70 tablet and $10 USB keyboard
take care of most of the stuff people need. Tablets even come with built in
camera albeit a crappy one.

Right now it looks like some flavor of Android and ARM processor are going
to win. Of course 30 years ago Digital Research, Atari, and Word Perfect
looked unstoppable.

Rick

I came up with clues (keyboard wear-and-tear, specific upgrades done
to it) to help Bob Woolley track down my Atari 1200XL, which got
jumbled into his pile of systems at some point over the decades. :)
Here in my home office, limping along with it's slightly unhappy
keyboard, and chroma-less S-video upgrade, sits my first computer (not
counting the Timex Sinclair 1000 I got as a hand-me-down, and used for
about a year before I got my 1200XL in 1983, it must have been).

I'm very happy to have it back. :) Overwhelming nostalgia and love, for one thing -- I used it exclusively for 9 years (aside from Apple IIs and such at school, and occasional C=64 gaming with my brother), and programmed countless unfinished (and some finished!) games in BASIC and TubroBASIC XL, and experimented with Action!. I'm guessing I wrote Gem Drop on the beast, as well, back in 1997/1998.

Also, the 1200XL that Bob had given me in the meantime, about 2.5yr ago, had some funky 512KB upgrade and a tweaked(?) OS, and it was generally not acting particular compatible with some software.

I've been going through my collection of floppy disks, taking some crappy cameraphone photos of some of my BASIC stuff and uploading them to Facebook, as well as sticking PostIt-notes to the disks that have one or more 'interesting' things on it that might be worth putting online for people to laugh^H^H^H^H^Hlook at.

It's amazing how many of my games I just stopped coding, and they languish at the end with this curse, bestowed upon them by their god, me, the programmer:

```
  999 GOTO 999
```

... of course, I was looking at all my old BASIC stuff using TBXL, and honestly so much of it was probably so dog slow in regular BASIC (which I used until 1992) that I deemed my experiments unsalvageable. Or I was just a kid and got bored and decided to do something else.

I didn't have Atari magazines growing up; I had some Compute!s (I think I got them long after they were published) and 2 or 3 Atari BASIC books. (Compute!'s First Book of Atari Games, IIRC, is well-worn.) I had to figure out how to make character sets using binary math by stumbling upon some bitmapped graphics printing routines in my XMM801 printer manual... prior to that, the DATA numbers and POKE 756 were all black magic. :)

I also had almost NOTHING in the way of commercial games (Boulderdash, Q*Bert, D-Bug, Delta Drawing, Pinball Construction Set, Chessmaster 2000; eventually AtariWriter II)... for years! Nowadays, I've inherited a small collection of cartridges from other people's collections, and of course almost every game can be had online, free and illegally. :^P

But looking at my collection of self-written game attempts, that fact is very obvious. I tried writing EVERYthing for myself. Baseball, golf, Othello, clones of Nintendo (NES) games, clones of Atari 2600 games, various Tetrises, a graphing calculator for math class, Scrabble, font editors, paint programs, GUIs, fancy DOS menus, word processors, etc.! That's just the stuff I've found in 2 small boxes of floppies. (Maybe 30 disks total.) I have GOBS of disks. :)

I look forward to finding more gems, more stuff to crack up at,
and sharing it with some of you all!

Here's what I've posted so far, crappy-photo-wise:

  https://www.facebook.com/media/set/?
set=a.10150680816790778.386037.518895777&type=3&l=a14e2a39ce
  (You don't need to be on Facebook to view that.)

Enjoy ;)

Yeah. I'm making no bets on anything these days. :)

RIM was big. Now they're a joke. Launching fake protests
(paid protestors) outside Apple stores in Australia. Seriously?
Grasping for relevancy, I guess. (And all my cynicism comes as just
a bystander. :))

I still have my first Atari system, an 800 w/ 48K RAM, 2 floppy drives,
printer, and software. Monitor was a 10" Panasonic TV. Still have that
too, but got beat up in shipping by persons unknown. But I found a
working spare at a thrift store and bought it.

Getting it set up and running is another low priority computer project.

There's just so many ways to separate me from my money!<grin>
http://www.alibaba.com/product-gs/545516201/
Worldwide_smallest_smart_android_tv_box.html

The specs on that one match my desktop except for hard drive. My laptop has
it beat.

It's a confusing time and I am easily confused. I've heard VGA is at the end
of its product life. I've heard real modems are selling for ~$300 because
they are still used by POS for credit cards and electric transfers: No one
trusts the internet or wireless.

I don't think you can buy anything but a SATA hard drive and IDE controllers
are going the way of the dodo. Remember when there was something called a
Sound Blaster?

This type of info used to be good news for someone like me, living off the
sharp edge of technology, but now people are so hard up they are stealing
stuff just for recycling. I may pick up a few more LCD VGA monitors just for
fool'in.

I've been really dissatisfied with stock Atari video for a while. I've had
an insight that may be cheap and work. There's a couple of techniques people
have used for bank switching carts and some devices like the Covox. One is
to latch the address lines and the other is to set up a single latch like a
74LS374 in the memory map. There's shift registers like the 74LS165 that
were used in early video for things like the Timex Sinclair and even Bob

Woolley's 80 column mod. What I was thinking was the same signals that latch cart banking could be used to latch data into a 74LS165 except instead of doing it under processor control or via a separate video chip like a 6845 I should be able to get the signals from ANTIC. Done this way everything will be sync'd with the existing display and overlap w/o flicker. Antic will just go through its reading 40 bytes per scan line which will load the shift register with it's own RAM, Simple form would just be a the shift register and an 8k RAM with enough glue logic to make it work. Shouldn't cost more the $5 in parts.

Of course you could do something fancy, like use a 16 bit wide RAM and two 8 bit shift registers with a fast dot clock to get 640x200 but that would add so much complexity I doubt if 1 in 1000 people could build it. Heck, I couldn't build it. I was happy with the ST 320X200 in 16 colors for games. I think I could be happy with and 8bit that throws 16k<8k system + 8k RAM> of display up.

Greetings everyone!

Here is the lucky winner for April 2012 at The DarkForce! BBS:

April 2012
1. leehanken wins a free 12 issue/1 year subscription to
   Atariuser Magazine

Also, here is the May 2012 prize:

May 2012
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner, and good luck to this months callers!

 :)

PS leehanken, I need your e-mail address!

              Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

So for at least one of my homebrews I wanted to get a spare POKEY or two:
Best combination sound chip, keyboard interface, serial interface, ~ADC,
chip ever made. Of course it is the only combination sound chip, keyboard
interface, serial interface, ~ADC, chip ever made

There's some old post floating around that said the 7800 carts that were
labeled "Super Game Cartridge" have the POKEY chip in them so I fleabayed
two KARATEKA carts on the cheap. Smashed one of the carts apart and no POKEY
to be found. I guess the Super part just means it has the ability to hold
48k of ROM as that is tagged on the circuit board.

I think I may have a 7800 floating around => not a total waste if I can find
it. If someone needs a slightly smashed and superglued back together
KARATEKA cart for free let me know as I have a spare. There are some solder
splashes on it, looks like one of the previous owners may have pulled the
ROMs to copy or something, but nothing serious.

Ballblazer 7800 may have a POKEY in it but I may give up the ghost on buying
7800 carts. POKEY chips are available from both B&C and BEST, I just balk at
paying $10 plus another $6-$10 for shipping. It's not a deal breaker since I
still have a bunch of 8bits I can 'borrow' a POKEY out of.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:
- ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/welcome
- http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED NEWSGROUPS

"And as a tablet/e-reader combo that tries to compete with Apple's iPad, the Novel is slow and inelegant, and lacks the full versatility that a true tablet user expects."

Reading that I just had to run out and buy one of these beauties. Not that I am keeping score but it's my second Android tablet. It was on sale at Big Lots for $40 so I figured what the hey. Believe it or not they had an Android netbook, no touch screen but a keyboard with mouse pad, on sale for $30 but I didn't get there in time for that one.

This was an inexpensive Pandigital Novel, the black reduced feature model that even people with the white model turn their nose up at.

It does everything you'd expect it to do considering the reviews. Works good at Wifi hotspots, nice picture viewer, couple of lame games that my six year old grandaughter likes to play, e-reader is functional.

Problem is no access to the real Android Market so I'm reduced to putting APKs on an SD card with my WinXP machine and plugging it into the tablet for the install which brings me current.

I've been running Droid800 on my two tablets and it's a pretty sucky experience. They are both trailing edge 800 MHz ARM based boxes. Does Colleen run any faster then Droid800? Are they all still open source? I haven't played with frame skipping yet but not experiencing much love. I expect just a little bit more performance from an 800 MHz, 32 bit, processor emulating a 40 year old 8 bit. I'm sure much of the half broken stuff like loading carts and binaries can be fixed but slow is too slow. I'm already shopping for a faster tablet!

Rick

I've been pretty happy with my Acer Iconia. You can get them refurbished
for about $230 on ebay. They have a dual core processor and a full size
USB port. I actually bought it for my wife for Christmas, but she lasted
about 3 months before deciding I'd get more use out of it.

I have been curious about how you're supposed to control the Atari
emulators I've tried to use, however...

Have you been able to order your Pi yet? I finally made it up to the top
of the waiting list last week, but apparently even now that it's ordered
it's still a few weeks out on shipping.

I haven't ordered it yet. I've heard that because it was intended for
schools in England, they will get priority over forgein sales. It isn't a
huge priority for me because of other projects competing for my time at that

momment. There are a few apps I would like to see on it, like running
AtariSIO for linux, but I have alternatives for now.

Colleen/Droid use shaded overlays on the screen to simulate joysticks. You just tap anywhere in the upper right hand side of the screen to bring up the menu system and console keys. It is a bit awkward switching back and forth between the touch screen and onscreen typewriter. My latest tablet does not have a provision for a USB keyboard and that is somethng I really miss. I had problems loading ROMs/Cartridges but .ATRs seemed to work fine.

The first Atari emulators, even those written in C, could run on a 286 and would outrun a real Atari on a 386. I've got to believe the ARMs have as much 'go fast' in them as a 286. I tried wading through the code and it has become a tower of babble. I can't remember how I originally got involved but David Firth emailed me with problems he was having with the original Atari800 emulating the CPU. He sent me a copy of his code, I compiled it and sent it through a disassembler to see what it was doing and made a few suggestions. He sent me back a different version written by his brother who was writing an Oric emulator. The thing is, David's code was completely obvious and understandable to anyone versed in C. My response was obvious and straight forward as to why there was a problem, the compiler, and how to work around it. His brother's code took yet a different way of working around the compiler problems and was both obvious and understandable. Now I look at this mess and it stuns me. I don't think I have it in me to learn enough ARM assembly language to go through that again.

Heck, too old and grumpy. Ordered parts from Jamco for another Atari project I started. I ordered a thought I ordered 27C080 and they sent me a 27C1001. 99% sure it was my fault but these senior moments are killing me!<grin>

I'm planning to use it to teach my kids about computers the way I learned about them as a kid, 30 years ago. I almost wish it didn't come pre-assembled.

Me too except grandkids<grin>. I think the Pi is targeted towards hackers more so then as an educational computer for now. It could end up being the Swiss Army knife of computers. I certainly hope it evolves into the use the designers envision. We have our own specific apps like AtariSIO that could be compiled on the platform and be a low cost alternative to things like SIO2SD.

When I was doing volenteer teaching work in Mt. View California, one of the most popular programs was really low level robotics. The system they were using was turn key: Preassembled kits and programming interface to computer with easy to use programming language. About 1 in 10 students seemed to have a genetic predisposition for things mechanical and it allowed them to let out their inner geek. It would be nice if we could find another generation that is more into hacking then watching tv and playing WoW.

Then there's other project in sore need of an update. One of my favorites is
http://www.megasquirt.info/ using an 8 MHz 68xxx derivative in that one and
it costs a small fortune.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

The Digital Game Museum is hosting an Atari Party -- all of my systems will be there -- at Cogswell Polytechnical College in Sunnyvale on Sunday, July 29th. It's free, and open to the public! Come enjoy a variety of Atari (and other systems) games, to celebrate Atari's 40th birthday, and the 100th birthday of Sunnyvale (long-time home of Atari).

More info at:

  http://digitalgamemuseum.org/blog/were-having-atari-party

My own Atari Parties, which I've run in Davis, California -- as well as some 'Retro Gaming for Teens' events that I've thrown for some local public libraries -- can be found here:

  http://www.newbreedsoftware.com/atariparty/

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

I have two Android devices being a Archos 32 and a Nextbook 8".

The Archos is great, the Nextbook barely passes as a usable device. :P

I think when it comes to Android devices the saving throw is to get a device that is marketed and supported by the Android market. If it is not a system that does not run that off the bat, you should probably steer clear of it.

However, that said, the Nextbook is good for reading pdf files in a larger format. Now if I can just figure out why Angry Birds is trying to access the internet all the time though it is already loaded, why my screensaver keeps wanting to activate (that was embarrassing when giving a presentation in front of a lot of people), and ... not sure but I think the movies do ok.

But Android Market and having that support I think is a good indicator.

Huh!? That is cool. How much did they go for in the end?

Cool! Got anything for July?

(Not that this has anything to do with why I haven't called. I have
simply been a bit busy...)

Wow Bill, that splash of pictures was amazing. Just reminded me of a time when I saw the online world, and culture of the world through the eyes and color of my Atari computer.

I mean looking at the Blake 7 pictures just reminded me of all the times I would download gif files to view on my lantern viewer, or when I would download 15 second LONG files just to hear Madonna or Van Halen sing a quick clip.

And I loved the more recent material with Beavis and Butthead and the ones that mention Facebook. So what was the Facebook ANSI BBS all about?

As for original equipment, I still have my Atari 400 (modified with 1200xl keyboard and upgraded to 48K), my Percom drives (not working at the moment, but I have other drives) and my 1025 printer, 1030 modem, and 850 interface.

Of course though my Atari 400 still works my current setup is a beige 800, 810 drive, and 850 interface. Trying to keep it all beige.

Currently looking for the double density beige drives, and also trying to get a beige printer of some sort up and running. Have a 825 printer, just need to get that dinosaur running. :P

Heard about this when it happened. All I have to say is, love him or
hate him (and I think you should love him just for the reason of what I
am about to say) you have to admit that without him Atari would have
been a name that would have stopped in the 80's. And for those of us
who like the later stuff of the ST line, Lynx and Jaguar, he at least
made those happen.

So a man in my book that will be greatly missed.

Angry Birds is full of ads (even the paid version; they're just not
quite as obvious). A popular workaround is to disable the Internet
connection when playing it.

I love my Acer tablet. :)

And my Raspberry Pi finally came this week. It's not an Android device,
though. It actually reminds me of the Sinclair ZX81 that my dad put
together from a kit, and was the first computer I learned to use. I'm
excited to finally get some time to play with it this weekend.

And now the bad news: I just checked a supplier while holding a credit card in my hot little hand and there is 141 day lead time for it. If I ordered it today I may get it in time for xmas. It was enough to make me hold off for a while longer.

I guess it is good on a few levels, lots of people buying them + lots of people hacking them.

Rick

I got on the waiting list (to order) in March, was notified I could
order in May, and it finally arrived last week. Are you at least on the
waiting list?

I plan on having a 'Retro Gaming Night' with my grandkids. They
actually love the simple stuff like Frogger or River Raid more then
the latest-greatest 3d stuff that they can't figure out.

The tech to bring out video from a device based on an ARM processor as
NTSC is mature. I've had a couple of different 'personal media
players' that had it in addition to their built in display. If my
provider had a phone available with composite out I would buy it in
heart beat. Something like an Android with composite video and J/S
ports would be hot. As it is, I will be lugging a 130XE and monitor to
my grandkids.

In the mean time I am leaning towards buying http://www.sparkfun.com/produc=
ts/10329
just because. Seems like on its lowest level you could run an Atari as
a term and be able do some simple stuff like [80 column term, storage,
mp3 player]. Save a couple of bucks over doing it just about any other
way. It seems like the device isn't hugely popular but anything done
with it could be ported to any computer using serial I/O.

Rick

Unclear what works, or if any of it doesn't work, but it's free if you
pay shipping! I'd prefer to send it all as one big package, of course.

* Atari 810 Disk Drive:
  * A/C
  * SIO
  * Blank(?) disk ("Atari Formatted Diskette II" :^)) [in "Diskette Holder"]
  * Manuals:
    * "The Atari 810 Disk Drive: An Introduction to the Disk Operating System"
    * "The Atari 810 Disk Drive: Owner's Guide"
    * "Disk Operating System II: Reference Manual"
    * "Inside Atari DOS" [Bill Wilkinson, OSS, Inc.; Compute! 1982]
* Atari 1010 Tape Drive:
  * A/C
  * SIO cable
  * Info sheet
* Cassettes:
  "Andromeda Conquest" (Avalon Hill) [in box, with manual]
  "Cytron Masters" (SSI) [no manual]
  "Stellar Shuttle" (Broderbund) [no manual]
  11 other tapes (various BASIC & bootable games) [in a 12-cassette case]

Email me privately if interested! First-come, first-served!
(Payment for shipping via PayPal is fine.)

Oh, also, I'm still near Sacramento, CA, so if you want to come pick any
of this up, that can be arranged.

Thanks!

Let me know how that card works! I've got a funky little setup at home
with an SD-card reader built into an old XM301 case, and an Atari 8-
bit monitor out to ST monitor converter box that I had someone custom
build for me, so everything on my desk has an Atari logo on it.....
Vince Briel has made an adapter board that can plug into Apple][s and
read MP3s from a flash drive, along with a player program. (
http://www.brielcomputers.com/wordpress/?cat=3D14) I wish I had the
know-how to re-adapt this for Atari 8-bit computers, as an SIO or PBI
device....

The rights are one thing, and the technical aspect another. I'm not aware that any retro-programmer or hacker or pirate ever actually successfully "broke" AR: C's subtle and multi-leveled copy-protection screen. I remember someone was working on a flashcart with "save" function, but I'm not aware (and I do check periodically) that that was accomplished.

IIRC, there was a particularly devious copy-protection fall-back in AR that would only present itself after one'd played his or her partially-cracked version for an hour or so.

Software publisher Elite has the wherewithal to accomplish this I
suppose, but I hope I hope they don't accept the inferiority of one of
the AR:C ports, such as ST or PC or Amiga.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Oh this is cool news!! I am glad the classics continue to find new life. I remember when I first saw MULE on the Atari (loaded off a PC in the 80's.. that was amazing to me) and just thought the game was funny! Hopefully people today will get a new blast with it.

Heck, might even be another Angry Birds for the iPhone users. :)

Whoa, sounds pretty good actually. I have always liked the idea of
running a SIO2PC like device off something about the size of a
Portfolio, so this would be interesting to see.

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

From
http://www.faqs.org/faqs/usenet/posting-rules/part1/
Announcement of professional products or services on Usenet is
allowed,
provided suitable restraint is exercised. Since someone else is paying
the phone bills for this, it is important that it be of overall
benefit
to Usenet. One of the few groups where such information is
appropriate
is comp.newprod. comp.newprod is a moderated group; you can get the
submission guidelines from the article "Welcome to comp.newprod",
posted
periodically to comp.newprod and news.answers. You can also get this
article by sending a mail message to mail-server@rtfm.mit.edu with the
single line:
     send usenet-by-group/news.answers/newprod

If your posting is really relevant to some other newsgroup,
particularly
one of the *.announce newsgroups, you may consider posting it there;
some
moderators allow product announcements in the *.announce newsgroups.
e.g.
an announcement about an Amiga product could go in
comp.sys.amiga.announce. Before you post any such announcements, make
sure that you carefully read all of the administrative documents for
the
group. Also, read the regular messages in the group itself for at
least
a week to make sure that your announcement is consistent with what
other
people post. Of course, this is true for *any* post, but especially
true
for commercial announcements.

General guidelines: Clearly mark your article as a product
announcement
in the subject. Never repeat these -- one article per product at the
most; preferably group everything into one article. Advertising hype
is
especially frowned upon -- stick to technical facts. Obnoxious or
inappropriate announcements or articles violating this policy will
generally be rejected. This policy is, of course, subject to change
if
it becomes a problem.

There exists an alternative hierarchy called "biz" specifically for
commercial postings. See the articles "Alternative Newsgroup
Hierarchies,
Part ...", posted periodically to several newsgroups, including
news.lists.misc. You can also get these articles by sending a mail
message
to mail-server@rtfm.mit.edu with the lines:
        send usenet-by-group/news.answers/alt-hierarchies/part1
        send usenet-by-group/news.answers/alt-hierarchies/part2

I would suggest we delete all references in the Atari faq to vendors
who don't follow the posting guidelines. Do I have a second?

Rick

I disagree with Rick - there are very few vendors of Atari merchandise, and so I tend to have the rationale that these "commercial" posts are ON-TOPIC. I assume you are going after Ben here, he posts up to 3 posts at a time, and yoiu can always ignore them, or kill-file him.

I have to laugh at the reference in the guidelines posted regarding "Someone else is paying the phone bills for this" in this day and age, I would imagine that MOST people are not on dial-up - don't start a war about it - when the guidelines were written, most people WERE on dial-up, so that statement is relatively irrelevant.

IF you are referring to Ben and Bravo Sierra, I like to know that there is at least one person out there still supplying the Atari market. I know there are a couple others KJ MANN (whatever) and AtariAge (again, whatever.)

Leave the vendors alone - they are hardly making a killing supplying old Atari stuff - mostly a labor of love, I would imagine. (After all, I paid almost $1,000.00 for my Atari 400 and asssorted keyboard mods, drives, and software back in the day - now you can pick this stuff up for a song...)

Now, if a vendor starts firing off hundreds of messages, or is a fraud - then for sure, remove them or maybe even make of note of their transgressions in the FAQ so people don't get suckered, but delete them?

Brings to mind Stalinist Russia, where your family name would be removed for transgressions against the state.

Anyways, what happened to tolerance, and freedom of speech??!

Just my $0.02

Agent D.A.D.

Heck, don't limit it to Ben, he seems to be a candidate for the most
obvious otherwise you wouldn't have noticed him right?

Reread the post, specifically the part: "Also, read the regular
messages in the group itself for at least
a week to make sure that your announcement is consistent with what
other
people post. Of course, this is true for *any* post, but especially
true
for commercial announcements."

Show me a list of people in the last 15 years that have done it. I've

been here that long and can't recall that many.

I live in the country and I am on dial up. The only thing that makes
the newsgroup readable is a kill file. Every once in a while I check
in with my smart phone and see 3/4ths of the messages here are Ben's
spam.

It is really looking like you didn't even read the title of this
thread or its content. IT IS A VENDOR LIST!

I say commercial vendors that don't follow guidelines and/or spammers
should leave the newsgroup alone.
>
> Now, if a vendor starts firing off hundreds of messages, or is a fraud -

Heck, people can spam if they want. Hows that for freedom of speech. I
just say if someone is a known bad actor, kick them off the FAQ
vendors list.
>
> Brings to mind Stalinist Russia, where your family name would be removed =
for
> transgressions against the state.

Oh please, we aren't killing 30 million people here, just saying
remove known spammers from the FAQ vendors. I will expand the list of
what it takes to get off the list if you like.
>
> Anyways, what happened to tolerance, and freedom of speech??!

We have to agree to disagree then.

Start a poll on Atari Age and I will not vote but go with the
majority.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

My son's been playing a lot of Chu Chu Rocket on our Sega Dreamcast,
and I enjoy the puzzle mode of the game (vs the fast-paced multiplayer
arcade mode).

Basically, you have a tile map with some walls between tiles, one or more
mice, zero or more cats, one or more rockets (goals), zero or more holes.

The objective is to get all of the mice into one of the rockets, and avoid
cats and holes -- you lose the puzzle if you lose just one mouse. Cats can
go down holes, and will stop bothering you.

What makes it tricky is: the mice and cats both just walk straight ahead
until the bump into a wall, at which point they turn clockwise and
continue. But if there's a wall to their right, they'll go left instead.
And if there's a wall on both sides (e.g., a] shape), they'll go back the
way they came.

So, to get the mice to the rockets, and in such a way as to avoid cats and
holes, you have a few directional-arrows you can place on the map before
you put things into motion. Which arrows, and how many, depend on the
particular puzzle.

The original game has a puzzle editor, and when you're creating a puzzle,
you put down the arrows necessary to complete the level. When you play
that puzzle, those arrows appear in a list of "Available panels", rather
than on the grid itself, obviously. :)

The game was released for GameBoy Advance back in the early 2000s, a few
years after the original Dreamcast release. It looks like it was released
for iOS (iPhone, iPad) about a year ago. (I only discovered yesterday!)

I've been thinking of making a puzzle game based on these simple rules for

the Atari 8-bit (but not planning on using the same name or theme, since copyright and trademark holders dislike that). To start out, I did a simple C-based terminal version under Linux. It's pretty clunky; it uses scanf() to read a string of text. When the game is in motion, you just hit [Enter] over and over again, and it draws another ASCII rendering of the map, with the cats and mice in their new positions, plus any stats info. :)

Here it is:

  http://www.sonic.net/~nbs/chuchu-20111024.tar.gz

My idea for the Atari 8-bit would be my Super IRG text mode (flickering between two fonts, but just one color palette, in multicolored text mode; it'll give me about 13 colors to use).

The grid is 12x9, and if I were to do 2x2 tiles of characters (giving me 8x16 pixels per tile), I need 18 rows of at least 24 characters each. I could use narrow mode (32 characters) and fit things easily.

Furthermore, I was thinking the map itself could be drawn as 9 rows of 24 characters, and then repeat each row, using another (pair of) font(s).

In other words, in memory, it'd look like:

```
ABCD12CDABCDABCDABCDABCD
CDAB34ABCDABCDABCDABCDAB
ABCDABCDABCD12CDABCDABCD
BCABCDABCDABCDABCD34CDAB
```

etc. But on screen, it would be twice as high;

```
ABCD12CDABCDABCDABCDABCD
ABCD12CDABCDABCDABCDABCD
CDAB34ABCDABCDABCDABCDAB
CDAB34ABCDABCDABCDABCDAB
ABCDABCDABCD12CDABCDABCD
ABCDABCDABCD12CDABCDABCD
BCABCDABCDABCDABCD34CDAB
BCABCDABCDABCDABCD34CDAB
```

and, using two fonts, one for even rows, one for odd, it could render tiles like:

```
##../\..##..##..##..##..
##..\/..##..##..##..##..
..##}{##..##..##..##..##
..##^^##..##..##..##..##
##..##..##../\..##..##..
##..##..##..\/..##..##..
..##..##..##..##..}{..##
..##..##..##..##..^^..##
```

In other words, in one font (used on even rows: 0, 2, 4, 6, ...),
"AB" would be the top half of one shape. But in the other font
(used on odd rows: 1, 3, 5, 7, ...), "AB" would be the bottom half of
that same shape.

In the end, it means I'm using 32 x 9 = 288 bytes of memory for screen
data. (That means 1/2 as much effort to draw the board every frame!)

Using standard fonts (no flickering), it'd be 2024 bytes of memory,
1K for the even rows, 1K for the odd. Using flickering mode, it'd be
4096 bytes.

Then there'd be the bloat from the Display List, to get the lines to
repeat. (Row 0 of screen memory on screen twice, then Row 1 twice.)
Plus the DLI to get the font to switch between rows (Row 0 on the screen
is Row 0 of screen memory with Font A. Row 1 on the screen is Row 0 of
screen memory again, but now with Font B. Row 2 on the screen is Row 1 of
screen memory, with Font A again. etc. Have I made my point, yet? :))

Since I don't do assembly, and BASIC would be too slow (even TurboBASIC XL
probably would be), and since my original code is in C (and yes, it could
'optimized', now that I've got the logic basically figured out), my target
language for this is Action!

Unless, of course, someone else wants to make the game. :) One big task will
be doing the graphics. I have my SuperIRG font editor, but I'd need to
manually account for the dual fonts between rows, since it doesn't.
(Not that I didn't come up with this idea, as a useful trick for high-color,
graphically complicated tiles for puzzle games, years ago!)

Knowing me, I'd probably do the art in Gimp on Linux, and then whip up some
tool in C to convert it to 4KB of Atari font data...

Don't get me wrong, life is good. Spent the weekend in Pacific Grove
with my SO, babysitting my grand kids 2-3 days a week. I'm really
slowing down.

As I said<?> I bought one of these puppies from Sparkfun.
http://shop.4dsystems.com.au/vga-embedded-vga-graphics-modules/295-9005.html

http://www.4dsystems.com.au/downloads/Semiconductors/PICASO-GFX2/Docs/PICASO-GFX2-
DS-rev1.pdf
Got it up and running, pretty nice display on the LCD VGA display I am
testing it with. I haven't tested it with any of the options like uSD
card or hooked the audio output up yet.

There's some things on my wish list that the device won't handle, for
instance it only plays mono audio WAV format files. IMO it would be
much nicer to have stereo and some kind of compressed format like MP3.
Heck, you can have 2 gigs of MS style file format and 2 gigs of RAW
sector I/O so that should be enough for several hours of easy
listening. It almost makes sense to me in that the sound will be
generated as a co-processor. For something like Dungeon Master you
would just tell it to play the clanking sound of the door then proceed
with the game logic with the existing processor.

I sweat details like should I hook it up through a joystick port like
the ill fated XEP80 or just hang it on the SIO buss. It does has the
ability to read 8 bit port data but as soon as you start talking about
popping the hood of an Atari you eliminate 80% of the people from
using it. I understand that they are selling these puppies for ~$50 so
they can't give $200 in support but I asked simple questions on both
Sparkfun and the 4d web sites and didn't get an answer. I am leaning
towards attempting to make it a SIO device. After reading through ~13
megs of PDFs I think it may be able to survive on the serial buss with
other devices. Even if it doesn't it will work as the one device you
should have. Here's my hit list of what it should be able to do:

Alternative to all SIO devices like SIO2PC, SIO2SD. Best sound quality sound device available vs. 2nd POKEY or COVOX if you can find one. Replacement for XEP80 sans printer port. It would make a nice upgrade for stuff like the John Harris cable TV information channel. Great static picture viewer with 16 bit color depth. Lot of bang for just over 50 bucks.

They have a number of demo apps for it like a version of Tiny BASIC and a few games like PONG/Breakout.
http://www.youtube.com/watch?v=vWKWQcfNd3Y

The system comes up with ~14k free memory before loading apps and something close to that in slower FLASH. Should be plenty for anything I want to do.

Only buyer's remorse I am having is they want $20+ for the programming cable. I'm not sure it is even necessary but I will try to find a work around.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

Sounds really cool! I wish I had more time to play on my XL, I really miss
it. :-(

1) Friendly, honest, helpful and fast with service! 2) Very Knowlegeable of Atari products & skilled at helping customers choose the items that best meet their needs. 3) The inventory changes regularly and often there are many hard to find items that are unavailable anywhere else. 4) Prices are usually less than on auction sites. 5) Very huge and alphabetically sorted lists of Atari items (OLD and NEW). 6) Ordering is very easy, no dozens of clicks on several HTML pages, just read and then copy+paste the ASCII text into your e-mail to order anything. 7) I avoid making promises I cant keep! 8) Ben's Benevolent 24 Hour Help HotLine And Voice Mail! Call Any Time, Any Day!If I Dont Answer, I'll Call You Back, Even Long Distance! Just Leave A Message With Your Phone Number & Best Times To Call Within Pacific Standard Time (PST) And I'll Call You Back! And Remember, If You Dont Leave A Message, I Cant Return Your Call!

Questions? You can E-Mail me or ask other Atari Users. You probably know 1 or 2 who bought from me. Quite a few have over the Years! (503)256-9974.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

For sale, an unique TV Scart Cable which embraces a large range of Atari
Home Computers.
It carries Composite Video + Stereo (Mono signal being doubled to both L/R
channels at the Scart Connector) and it's internally sealed against
traction.

The quality of both Audio and Video is truly higher, another world if
compared to the common RF lead. Such Cable will even work with modern (LCD)
TVs.

Compatibility List:
. Atari 65XE
. Atari 130XE
. Atari 800XE

. Atari 600XL
. Atari 800XL
. Atari 1200XL

. Atari 800

Link: http://cgi.ebay.it/ws/eBayISAPI.dll?ViewItem&item=170727861638

Cheers,
Oge

Can anyone help me find a copy of the installation guide for the original
happy 1050 board, I have searched to no effect so far, and have lost my
original

hope someone can assist

Rich

he
> PBI? Would it work from there?

It has the ~equivalent of a 15 bits of I/O pins. From what I gather
not a lot of people are using it as a parallel device. Most seem to be
like me, still fumbling around with getting the serial to work.

If I sound confused, it is because I am. What I *THINK* this
documentation covers is the basic FPGA with its soft core 16 bit
processor.
http://www.sos.sk/a_info/resource/c/4Dsystem/PICASO-GFX2-DS-rev1.pdf

BUT what I bought was a development/stand alone/embedded board that

doesn't have all the pins brought out.
http://www.4dsystems.com.au/prod.php?id=3D149

So even though the processor has 2 com ports only one is brought out.
Ditto for I2C port; there but not brought out.

The programmers reference I am reading from is over 300 pages. I
figure if I learn a page a night I am just about senile enough to
forget it as fast as I read it.<grin>

I'm really in the woods here. I don't have their programming cable yet
but I am under the impression on start up it looks for an autorun
script on the uSD card. I wrote a test script and put it on the uSD
but haven't booted the thing with it installed yet.

I'm asking myself a lot of why(s) as I work with it. I love the size,
about as big as a match book, but hooked to a VGA monitor it loses
some of its size advantages. I also ask myself 'why not just do the
same thing with software on a full PC?" I could imagine games and apps
running on an Atari but dumping commands like playing a WAV file to a
PC but at some point it loses a bit of purity if that is the right
word.

Heck, under the hood of an 8bit with 4gigs of uSD, the VGA connector
coming out the back, and the ability to play WAV files would make it
worth it.

Rick

For sale, X3 Heavy Duty PSUs which will work with the following Atari
machines:

. Atari 65XE
. Atari 130XE
. Atari 800XE

. Atari 600XL
. Atari 800XL

. Atari XE Game System

Being its amperage even far higher than the most power-hungry of the above
Atari Home Computers, this Heavy Duty Power Supply will work flawlessy in
every situation. This includes modded and/or expanded Atari machines.

Link: http://snipurl.com/2ox69c (Only few units available)

Cheers,
Oge

eye am sofa king re tod did

This growing old thing is rough. My OCD used to pull me through rough
spots when normal people would have given up.

The documentation said I could run scripts from a uSD card installed
on the board. I spent about 4 hours writing scripts, trying to use
demo scripts, reading the web site, reading the documentation, nothing
worked. I was thinking scripts would be ASCII text type files similar
to batch files. I was thinking wrong, the device only supports
compiled scripts! Everyone seemed to get this but me.

Punch line to this is people don't need to buy the ~$26+ shipping
cable to program the device.

It's a pretty simple process, just load the free 4d Workshop, write a
script, hit the compile button. This will produce a file ABC.4dScrpObj
where ABC is the name of your source file. Copy this to a fat 16 uSD
card as autoexec.4ds uSD and insert it in the Picaso, on booting the
Picaso the program will run.

I'm not sure where I will go next but I want to start checking serial
functions. I am 99% sure I can just use a bilatteral switch or 3 state
buffer to isolate device on the Atari serial buss should the need
arise. I am thinking I may want to look at the joystick port with the
old MPP serial handler or hack the XEP80 handler to work with it.
Eventually I would like to have it on the serial buss if I can work
out the details but I have to make sure I can make it run at 19k BAUD
from internal software. Docs say it expects a command i.e. 'u at 9600
BAUD as an autobaud command. I'm pretty sure I can just write a
program to set the default to the right figure. Goal is still to use
it as a cheap HD and XEP80 replacement that plays nice with other
stuff on the buss. Worst case is it ends up being the only thing that
can be plugged into the buss.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by

Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Come one, come all, to the Seattle Retro-Computing Society's first
monthly meeting of 2012! It will be held Saturday, January 28th from
11:30 AM to 5:00 PM (please note our new, later starting time).

Do you do any of the following with old computers? Will you be near
Seattle on Saturday?

   + Use, collect, and/or restore them
   + Play games on them
   + Write programs for them
   + Develop new hardware for them
   + Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you
can
show off your awesome stuff, bounce ideas off of fellow enthusiasts,
and
be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum,
which
is gradually fitting out a computer museum in Seattle's SODO
neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table,
and enough table space & power to set up anything you may want to show
off!

For further details, please see our web page at
http://www.seattleretrocomputing.com/ and our mailing list at
http://groups.google.com/group/seattle-retrocomp . Hope to see you
there!

bangs head on wall

Yep. 'Tis who it be; just looked at credits of Super Tux 2.

Must shutdown brain and replace faulty memory module...oh wait: don't have a spare! CRAP!!!

Greetings everyone!

Here is the lucky winner for January 2012 at The DarkForce! BBS:

January 2012
1. _ggn wins a free 12 issue/1 year subscription to
   Atariuser Magazine

Also, here is the February 2012 prize:

February 2012
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner, and good luck to this months callers!

 :)

[Crossposted - please remove irrelevant newsgroups when replying]

I'm proud to announce version 2.13.3 of cc65. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- the following Commodore machines:

  VIC20
  C16/C116 and Plus/4
  C64
  C128
  CBM 510 (aka P500)
  the 600/700 family
  newer PET machines (not 2001).

- the Apple][and successors.

- the Atari 8 bit machines.

- GEOS for the C64 and C128.

- the Nintendo Entertainment System (NES).

- the Supervision console.

- the Oric Atmos.

- the Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This version is a bugfix release against 2.13.2. It includes about 40 bug and documentation fixes and some minor improvements:

* Fixed some macro issues (cc65).

* Static const local data goes into RODATA, not DATA (cc65).

* Fix error handling in .LEFT (ca65)

* Fixed problems with 80 column mode (C128 library).

* Fix problem when converting function to void pointer (cc65).

* Fix register info for several runtime functions. Result was invalid code (cc65).

* Fix smbx and rmbx instructions (da65).

* Fix problem with .REPEAT (ca65).

* Fix an error in the runtime division routine (cc65).

* Fix problem with alignments >= 256 bytes (ca65).

* The LINE function mistakenly enabled the BASIC ROM (TGI driver for C64).

* Fix internal error caused by error recovery (or lack of) (cc65).

* Fix invalid handling of signed int types in some cases (cc65).

* Fix some issues with conio scrolling (C128 library).

* Fix and improve the code for compares (cc65).

* Fix some macro issues (ca65).

* Fixed/improved several error messages (all tools).

* Disallow __asm__ on global level (cc65).

* Remove final jump to RESTOR for all CBM platforms (cc65 libraries).

* Add missing export for CBM510 platform (cbm510 library).

* Fix problem with access to structs returned by functions (cc65).

* Fix an internal error in the code generator (cc65).

* Merge back POSIX directory routines for the Atari (atari library).

* Merge back Olivers C interrupt handling code (cc65 libraries).

* Several documentation changes.

* Several documentation fixes and improvements.

Precompiled binaries are available for the most common platforms. On many other host platforms, the sources compile out of the box, so you'll able to create your own binaries.

For RedHat Enterprise Linux 5, ready made RPM packages are available. These packages may also work on other rpm-based Linux systems. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop code for one of the target machines, you need the compiler RPM package *and* one of the target machine packages. Be sure to

download the documentation package if you're new to cc65.

For windows users, there's a user friendly installer package (the one with the .exe extension). All subpackages are selectable from within the installer dialogue. The installer will also setup the necessary environment variables and start menu entries. It is recommended that Windows users choose this package instead of the .ZIP files.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development host system (Windows or whatever) *and* one or more of the target machine packages, plus optionally the doc package.

All packages are available from the MU software FTP server:

        ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

         http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

        http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

         Uz

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here.  "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others.  Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products.  Titles of products produced by the
developer are listed.  No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book.  Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed.  Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices.  Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title.  If no company name exists, a personal name is used.  "See"
references indicate complete information may be found under the given
heading.  "See also" references indicate closely-related information may
be found under the given heading.
```

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange

The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by

Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Congratulations! I'm eager to find time some day to play with this thing,
at last. In the meantime, just had our 2nd baby, so it may be years off
at this point. :^)

What is it?
=20
The Spring-Time Retro-Computing Convention is a family oriented event where=
 people of all ages are encouraged to come learn about computers from the G=
olden Years of computing technology. The STRCC is not geared to a specific=
 computer or manufacturer, but is intended to be inclusive of various brand=
s and models such as the Commodore 64, Apple II and Atari 800. Even if you=
 have or are a fan of something truly unique, you are invited to attend and=
 help spread the public knowledge of your hobby.
=20
Attending SRTCC is free. If you would like a table to set up your vintage =
hardware for display the fee is a mere $10 per day. If you want to attend =
SRTCC and sell your goods or services, each table used is $225 for all thre=
e days (Friday, Saturday, Sunday). The SRTCC is not operated for a profit =
so donations will be gladly accepted (Donations of $50 or more get a free n=
on-vendor table for all three days). Any donations above the actual cost o=
f the event will be put towards a local charity.
=20
If you are interested in attending and need a table, please email me at srt=
cc@paytonbyrd.com to make arrangements.
=20
The SRTCC is being held at the Riverview Inn in beautiful and historic Clar=
ksville, TN. The address is 50 College Street, Clarksville, TN, USA 37040=
.

Come one, come all, to the Seattle Retro-Computing Society's regular
monthly meeting! It will be held Saturday, February 25th from 11:30 AM
to 5:00 PM (please note our new, later starting time).

Do you do any of the following with old computers? Will you be near
Seattle on Saturday?

   + Use, collect, and/or restore them
   + Play games on them
   + Write programs for them
   + Develop new hardware for them
   + Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you
can
show off your awesome stuff, bounce ideas off of fellow enthusiasts,
and
be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum,
which
is gradually fitting out a computer museum in Seattle's SODO
neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table,
and enough table space & power to set up anything you may want to show
off!

For further details, please see our web page at
http://www.seattleretrocomputing.com/ and our mailing list at
http://groups.google.com/group/seattle-retrocomp . Hope to see you

there!

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

Hello,

I am searching for the Bit-Writer supplement for the Super Archiver

which was sold by CSS in the past.
It does not matter if it is just the Hardware-Board or a complete 1050
Drive.

Best
Michael

Greetings everyone!

Here is the lucky winner for February 2012 at The DarkForce! BBS:

February 2012
1. Mark_G wins a free 12 issue/1 year subscription to
   Atariuser Magazine

Also, here is the March 2012 prize:

March 2012
1. Atariuser Magazine - some lucky caller will win a free 12 issue
   /1 year subscription to Atariuser Magazine.

Congratulations to our winner, and good luck to this months callers!

 :)

Hello,

if the 1050 contains also the "Bit Writer" supplement I would like to
buy it.
The software for the super archiver and also for "bit writer" should
be included as well.

Whats the price for it?

Best
Michael

Hello,

i am searching for Ultimon built-in Monitor/Debugger 800XL or 130XE.

It seems, that it is the only Debugger capable of setting Breakpoints.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Known mirrors of the latest version of this document:

Come one, come all, to the Seattle Retro-Computing Society's regular monthly meeting! It will be held Saturday, March 24th from 11:30 AM to 5:00 PM (please note our new starting time, which is an hour later

than it was last year).

Please read the important announcement about our website at the end of this message!

Do you do any of the following with old computers? Will you be near Seattle on Saturday?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, which is gradually fitting out a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you may want to show off!

For further details, please see our web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!

We are pleased to announce that the feature on our website which says who is coming, what they mean to bring, and what they hope someone else will bring has been de-zombied. We formerly had trouble with it not resetting after the meetings each month, so no one could rely on anything they saw there unless it happened to contain a date.

Well, it now works properly (AND says when you're coming even if you don't say you'll bring anything!) -- but since everyone kind of gave up on it over the last few months, as I write this only three people have filled it out for the coming meeting. Please take a moment to fill in your RSVP for March!

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit family of computers are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 10 days: comp.sys.atari.8bit, comp.answers, news.answers

   http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

1) Friendly, honest, helpful and fast with service! 2) Very Knowlegeable of Atari products & skilled at helping customers choose the items that best meet their needs. 3) The inventory changes regularly and often there are many hard to find items that are unavailable anywhere else. 4) Prices are usually less than on auction sites. 5) Very huge and alphabetically sorted lists of Atari items (OLD and NEW). 6) Ordering is very easy, no dozens of clicks on several HTML pages, just read and then copy+paste the ASCII text into your e-mail to order anything. 7) I avoid making promises I cant keep! 8) Ben's Benevolent 24 Hour Help HotLine And Voice Mail! Call Any Time, Any Day!If I Dont Answer, I'll Call You Back, Even Long Distance! Just Leave A Message With Your Phone Number & Best Times To Call Within Pacific Standard Time (PST) And I'll Call You Back! And Remember, If You Dont Leave A Message, I Cant Return Your Call!

Questions? You can E-Mail me or ask other Atari Users. You probably know 1 or 2 who bought from me. Quite a few have over the Years! (503)256-9974.

Come one, come all, to the Seattle Retro-Computing Society's monthly
meeting, on Saturday, November 26th, 2011! You don't want to miss this
one -- it's our last meeting until January 2012.

Do you do any of the following with old computers near Seattle?

   + Use, collect, and/or restore them
   + Play games on them
   + Write programs for them
   + Develop new hardware for them
   + Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading
this
near Seattle, then the SRCS is for you! We exist so you can show off
your awesome stuff, bounce ideas off of fellow enthusiasts, and be
inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor
of vintage machine you prefer! Come on down and tell us about it!

Please note that, as it would fall on Christmas Eve and no one would
attend, we will not be meeting in December. If you miss this meeting,
you won't get to see everyone (and their nifty stuff) again until
January.

The meetings are graciously hosted by the Living Computer Museum,
which
is gradually fitting out a computer museum in Seattle's SODO
neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table,
and enough table space & power to set up anything you may want to show
off!

For further details, please see our web page at
http://www.seattleretrocomputing.com/ and our mailing list at
http://groups.google.com/group/seattle-retrocomp . Hope to see you
there!

Gordon "gsteemso" Steemson
SRCS agitator-in-chief
